

SP BRACKET

SOLAR FIXTURE BRACKETS

SP - Side of Pole Bracket

SEPCO Solar Lighting Fixture Brackets are used with complete solar lighting systems to complete the system and allow for mounting the fixtures to a pole or ground mounting for some applications.

The Side of Pole Bracket (SP) is an elliptical aluminum bracket available in a 4', 6' and 8' length standard with a 2' upsweep, longer lengths are available upon request and specification requirements. The wire can be routed inside the pole and into the back of the bracket foot for no exposed wiring. Brackets are standard in brushed aluminum but can be powder coated to match the fixture color.

Project Specifics

Project Name: _____

Project Notes: _____

SP4 - Side of Pole Bracket 4'

SP6 - Side of Pole Bracket 6'

SP8 - Side of Pole Bracket 8'
